

PMA2014/ETHIOPIA

PERFORMANCE, MONITORING & ACCOUNTABILITY 2020

PMA2020 is a five-year project that uses innovative mobile technology to support low-cost, rapid-turnaround, national-representative surveys to monitor key indicators for family planning. The project is implemented by local university and research organizations in ten countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/Ethiopia is led by the Addis Ababa University's School of Public Health at the College of Health Sciences (AAU/SPH/CHS), in collaboration with regional universities, the Federal Ministry of Health and the Central Statistics Agency. Overall direction and support is provided by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health and funded by the Bill & Melinda Gates Foundation.

SAMPLE DESIGN

PMA2020/Ethiopia used a two-stage cluster design with urban-rural, major regions as strata. A sample of 200 enumeration areas (EA) was drawn by the Central Statistical Agency from its master sampling frame. For each EA, 35 households and 3-6 health service delivery points (SDPs) were selected. Households were systematically sampled using random selection. Households with eligible females of reproductive age (15-49) were contacted and consented for interviews. The survey aimed for sample size of 7000 households, 7000 females and 500 SDPs. Data collection was conducted between January and March, 2014.
